

**2014 PAPSA / EPSA Pre congress Workshop
In collaboration with
British Association of Paediatric Surgeons**

*Greenwood BAPS Neonatal Surgical Skills
Course*

Learning Resource Center (LRC)

Cairo University , Egypt

Overview:

Greenwood Overseas Skills Course Fund was designed by the British Association of Paediatric Surgeons (BAPS) to allow a small faculty of trainers familiar with the BAPS/RCS England Paediatric Surgical Skills Course to travel overseas for a three day visit to provide simulation training.

The Pan African Pediatric Surgical Association (PAPSA) has hosted this course three times before in Accra, Ghana(2008), Dar Esalam, Tanzania (2010), and Cape Town, South Africa (2012) just prior to the biennial congress of PAPSA.

There was a positive feedback from the previous participants. We are pleased to organize the fourth Greenwood Overseas neonatal surgical Skills Course in Learning Resource Centre (LRC) in Faculty of Medicine, Cairo on 11 November 2014. The

course is one day long with the day before set aside for preparation and training the local trainers.

Number of registrants is dependent on the local facilities. This year the expected numbers will range from 30 - 40 registrants. Due to limited number, early registration is highly advised.

Objectives of this course:

1- To provide hands on training for surgeons , trainees and health professionals in newborn surgery so that independence can be reached from external source.

2- To train a group of PAPSA trainers (TOT) on tips and tricks on how to run such course with available resources.

course providers:

Faculty from the International Affairs Committee (IAC) for British Association of paediatric Surgeons (BAPS) and a local faculty .

Chairman:

Hesham El Saket , MD

Prof of Pediatric Surgery, Cairo University

Who should register for this course:

- *Paediatric surgical residents*
- *General surgical residents, who are planning to choose paediatric surgery as a speciality*
- *Junior paediatric surgeons, who are interested to know other different techniques in some neonatal surgical problems .*

The Course: Hands On Practical Training
